

The PDF organizes development into 5 milestones.

Milestone 1 – Model Selection & Architecture

- Research AI models
- Select Gemini
- Define application architecture
- Set up development environment

Milestone 2 – Core Functionality

- Develop workout generation
- Develop nutrition tip generation
- Develop feedback-based updating
- Develop user/plan storage
- Implement FastAPI backend

Milestone 3 – `routes.py`

- Create main application routes
- Connect frontend with AI functions
- Connect routes with database

Milestone 4 – Frontend Development

- Design UI
- Create HTML pages
- Implement Jinja2 templates
- Make UI responsive

Milestone 5 – Deployment

- Prepare local deployment
- Test the application
- Verify local server operation
