

The PDF describes testing mainly through local deployment and API testing.

Run the application

```
uvicorn app.main:app --reload
```

Then open:

<http://127.0.0.1:8000>

API Testing

FastAPI provides:

<http://127.0.0.1:8000/docs>

This allows developers to explore and test the available endpoints.

Main routes to verify

/

/generate-workout

/submit-feedback

/view-all-users

The PDF explains the purpose and processing of each route.
